

Speedline Drywall products launches two new Solutions guides

The newly rebranded Speedline Drywall products range of high quality drywall products and accessories available from SIG Insulation and SIG Interiors stockists has launched two new solutions guides to help with product choice and installation.

Metal Solutions

A fully revised version of the Metal Solutions guide is available. Already established as an invaluable tool for specifiers and installers of drywall partitioning and wall linings, the guide offers solutions for residential, healthcare and education applications as well as helping the construction industry satisfy the latest building regulations.

This 88 page, A4 sized guide includes information on how Speedline metal profiles have been rigorously tested with the three major plasterboard manufacturers to offer solutions for even the most stringent of requirements.

All data contained within the guide is based on UKAS accredited tests for fire, acoustic and rigidity and all Speedline Metal System products conform to the latest British and European standards.

Access Solutions

An A5 guide to the range of Speedline Access panel solutions is also available with solutions to fit a variety of internal wall and ceiling constructions. Picture and beaded solutions are available with prices to suit all budgets and fire, acoustic or airtight applications. The guide covers both standard and bespoke Speedline Access solutions along with locking options and installation guidelines.

Copies of the guides are available free on request from SIG Insulation or SIG Interiors stockists nationwide or by visiting www.speedlinedrywall.co.uk.
